

SVIJETLO - TAMNO

full prof. PhD Miroslav Huzjak
Faculty of Teacher Education University of Zagreb, Croatia
Evaluation of children's artwork

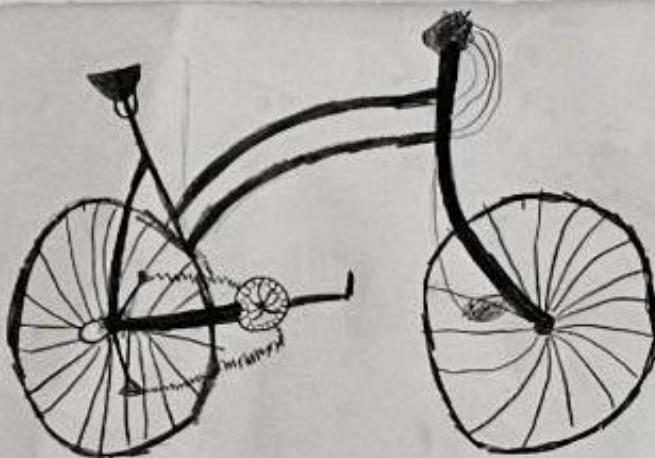

**Is the evaluation matter of personal opinion or taste?
If not, which criteria to use?**

Objectives of education

Johann Heinrich Pestalozzi (1746 -1827): 3xH: „head, hands and heart „

Benjamin Samuel Bloom (1956): “Bloom taxonomy”

(revisions : Krathwohl 1995, Anderson & Krathwohl 2000, Lynn Ericson 2007)

1. **cognitive domain** - knowledge, “head”
2. **psychomotor domain** - abilities, skills, “hands”
3. **affective domain** - attitudes, habits, beliefs, values, “heart”

1. **Cognitively**, the pupil adopts art's and other concepts, and learns the procedures of using art materials (*tempera, pencil, collage paper, clay*, etc.)
2. **Psychomotorically**, the pupil develops manual skill by using different art materials.
3. **Affectively**, the pupil develops responsiveness to stimulus, interest, independence, sensitivity, individuality and originality, critical thinking and appreciation and evaluation.

The **aim** of the educational process is to achieve the full development of pupils: cognitive, psychomotoric and affective.

- 1. Cognitively**, the pupil adopts art's and other concepts, and learns the procedures of using art materials (*tempera, pencil, collage paper, clay*, etc.).
- 2. Psychomotorically**, the pupil develops manual skill by using different art materials.
- 3. Affectively**, the pupil develops responsiveness to stimulus, interest, independence, sensitivity, individuality and originality, critical thinking and appreciation and evaluation.

We evaluate:

- 1. Successful performance of a visual problem**
- 2. Successful representation of motifs**
- 3. The success of using art materials.**

All this in relation to:

1. age
2. originality
3. invested effort

Analysis and evaluation of the visual art products

We can analyse and evaluate:

1. Successful performance of a visual problem

(Fulfillment of the art task, richness and range of solutions, not overwriting, visual literacy)

2. Successful representation of motifs

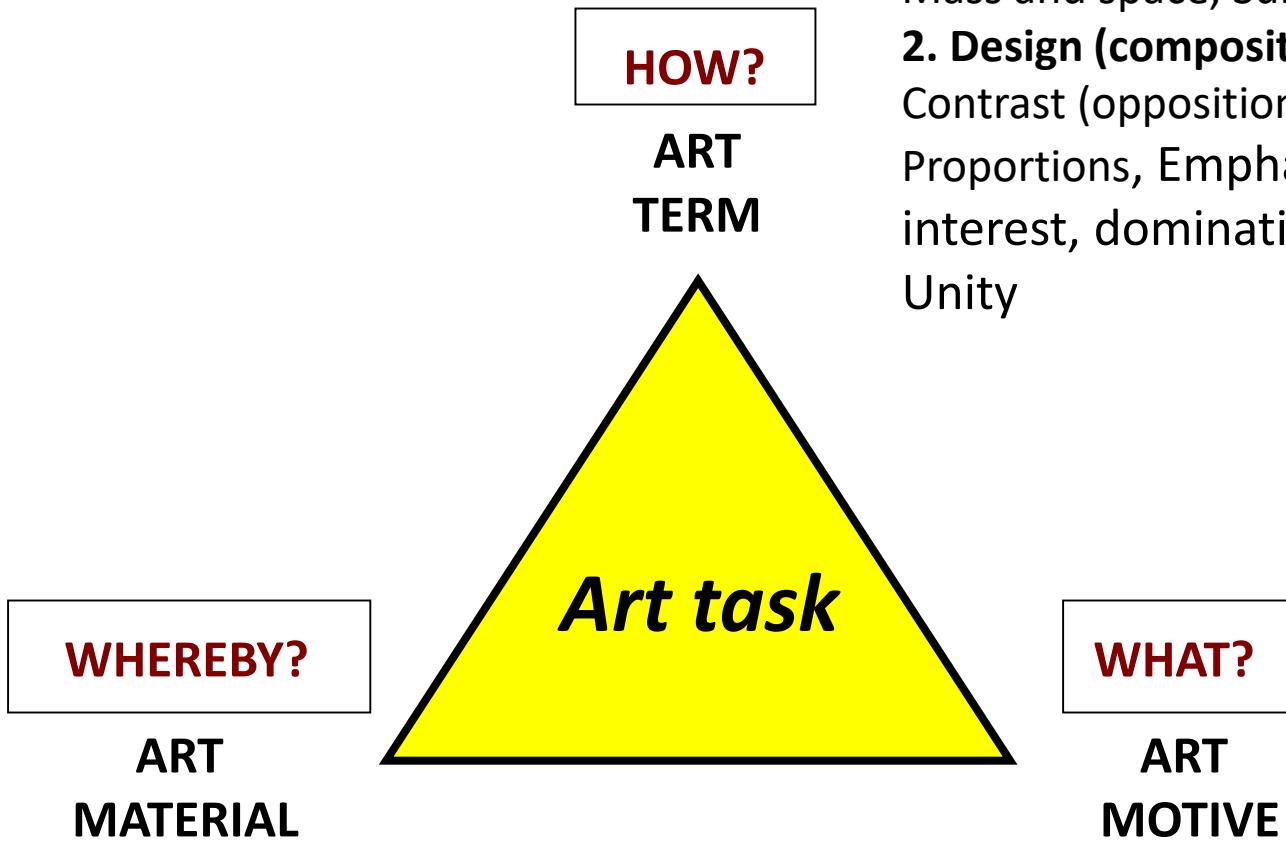

(Unusualness, imagination, originality, absence of stereotypes, number of details, size, accommodation in format, sometimes proportions ...)

3. The success of using art materials

(Correct color density, range of color tones, pressure range, compactness, not smudging with your fingers

Responsiveness to stimulus

(Relation to work, process, motivation, originality, effort, persistence and consistency, independence, ability to evaluate)

Drawing, painting, sculpture and graphic materials and techniques

Visual motives, non-visual motives and artistic language as a stimulus

Art's concepts, visual language:

1. Visual elements:

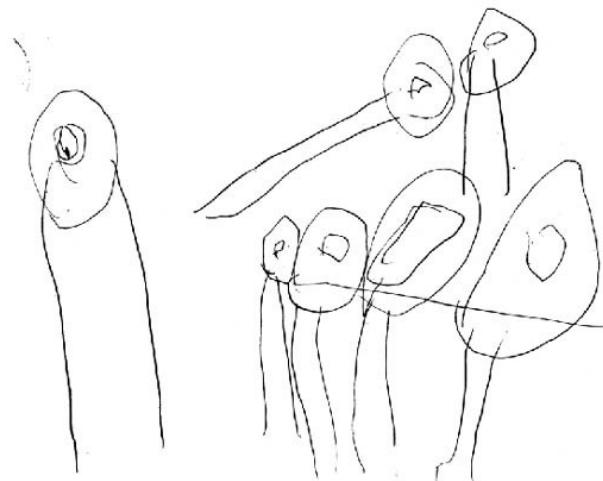

Line, Colour, Shape,
Mass and space, Surface

2. Design (composition) principles:

Contrast (opposition), Rhythm,
Proportions, Emphasis („center of
interest, domination), Harmony,
Unity

Age

3 years old

5 years old

10 years old

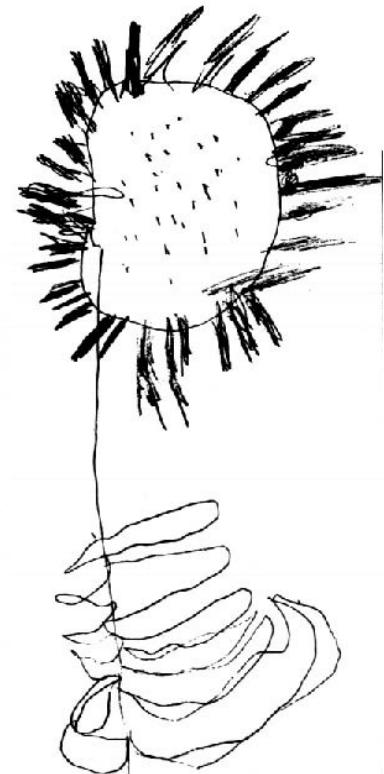

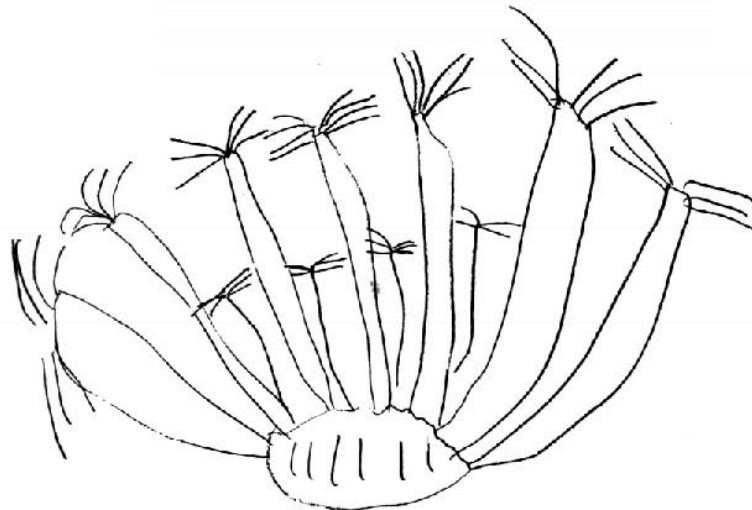

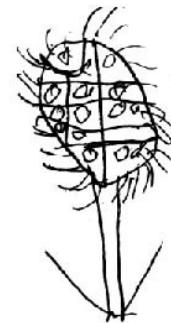

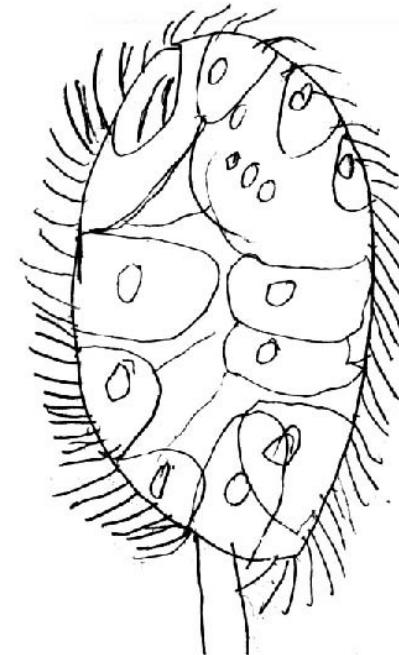

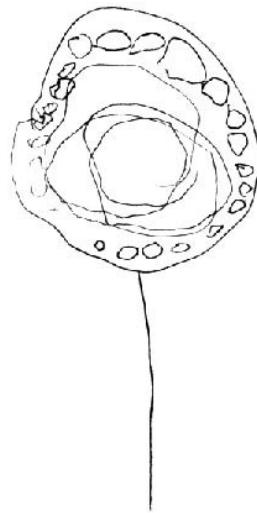

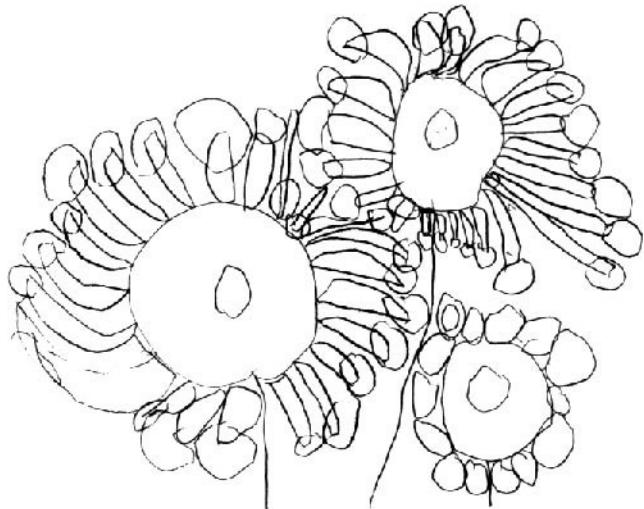

Five-year-old child sculptures

Ten-year-old child sculptures

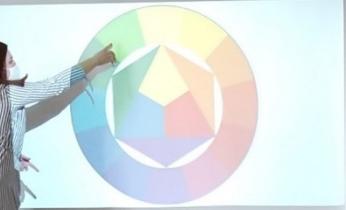

5 years old: flower

cliché, stereotype

Stereotypes

1. Successful performance of a visual problem:

Understanding of terms, number of colour tones, the range of line character, spatiality ...

Shades
of one
color,
tempera,
Pietá

1. Successful performance of a visual problem

Shades
of one
color,
tempera,
Pietá

Poor
performance,
4th grade

1. Successful performance of a visual problem

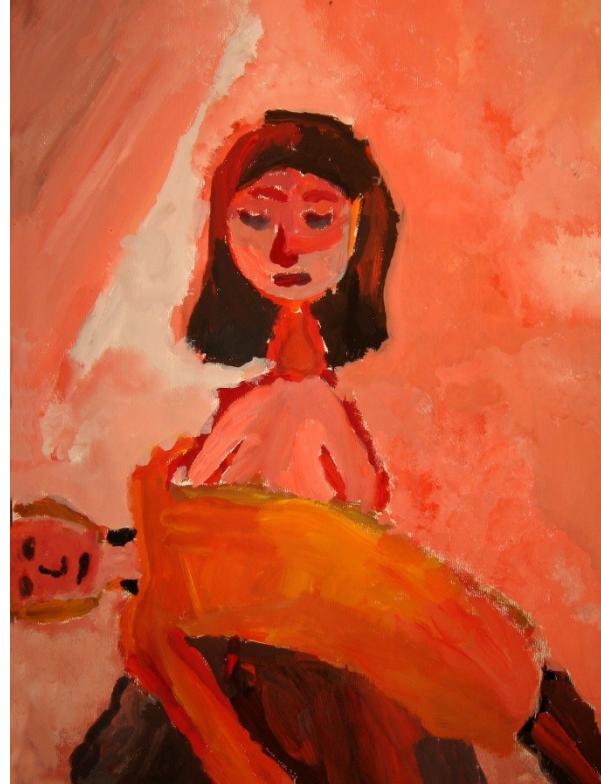

Average performance,
4th grade

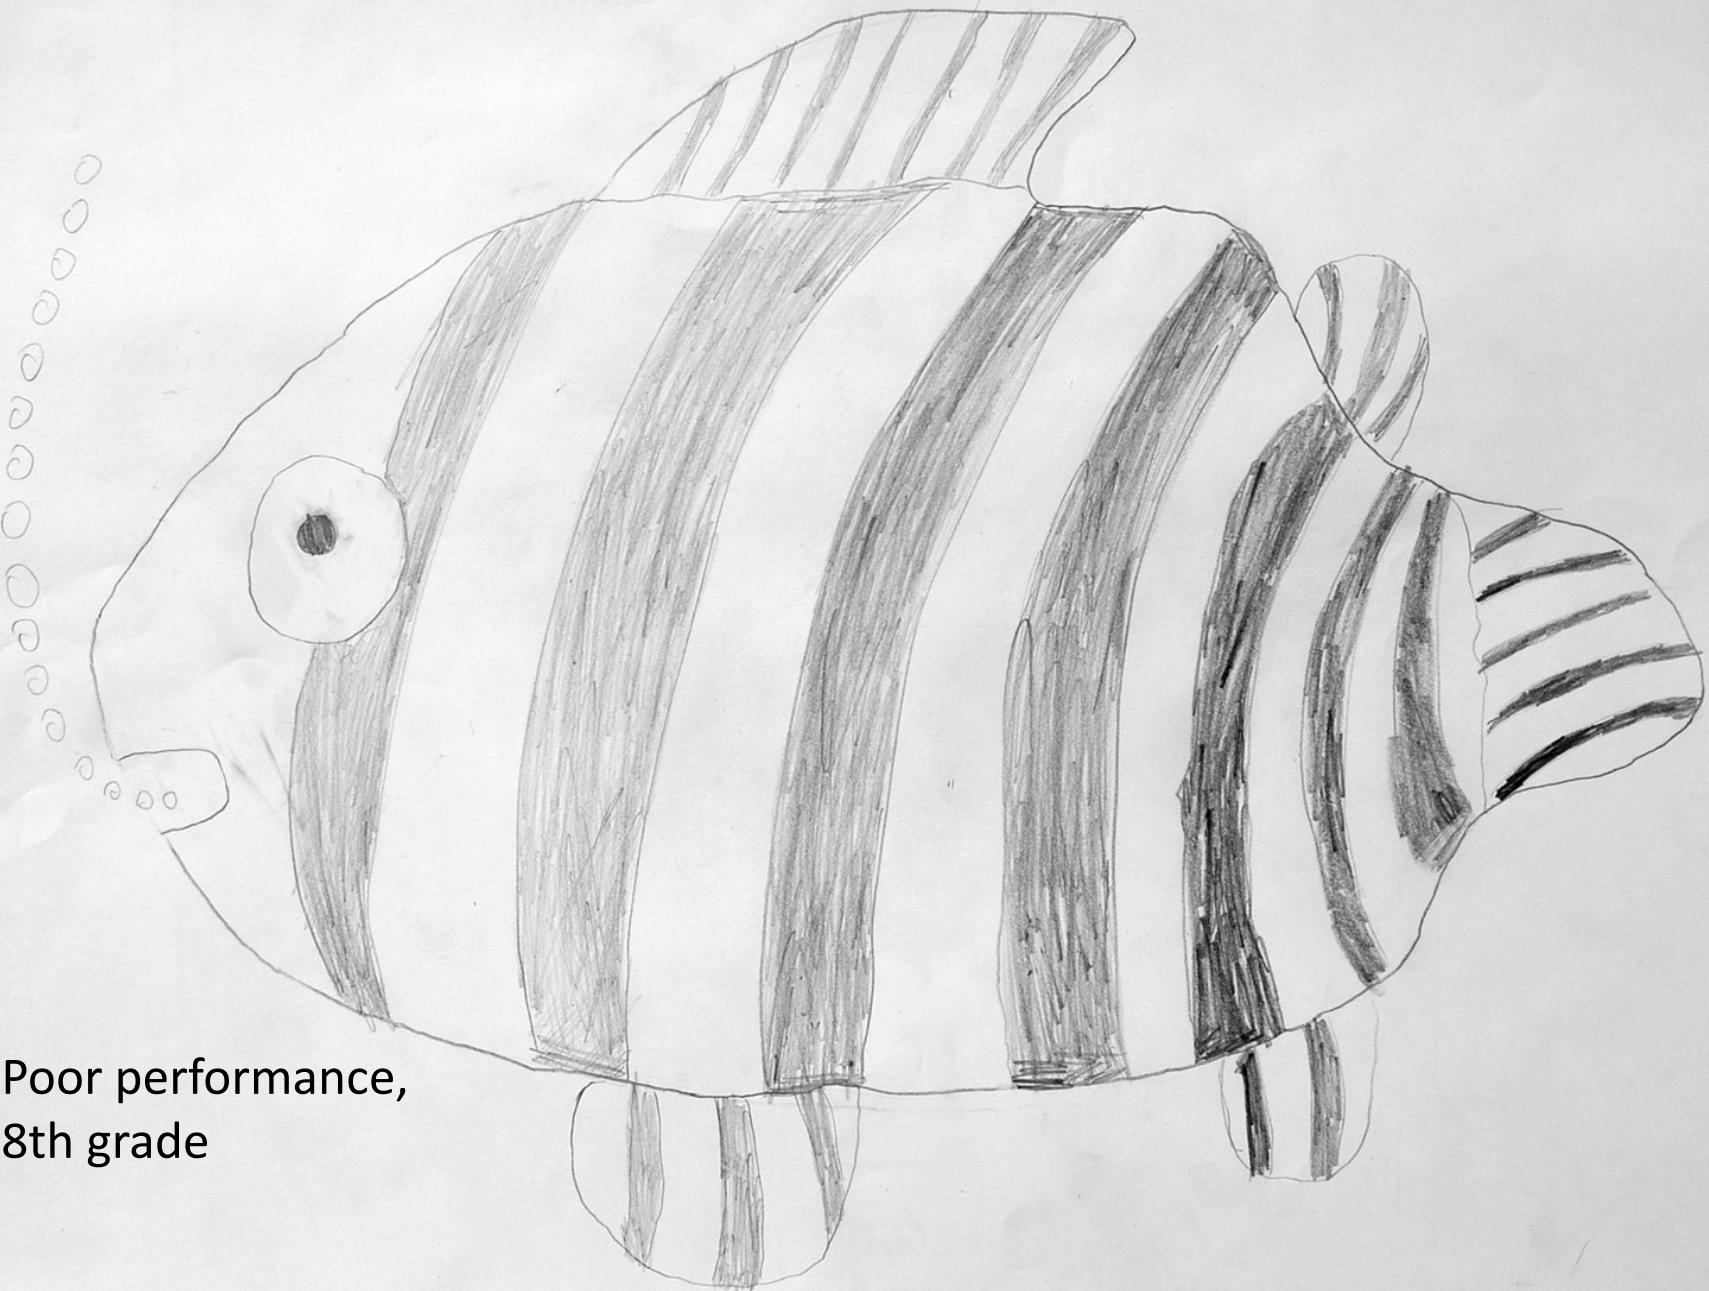

1. Successful performance of a visual problem:

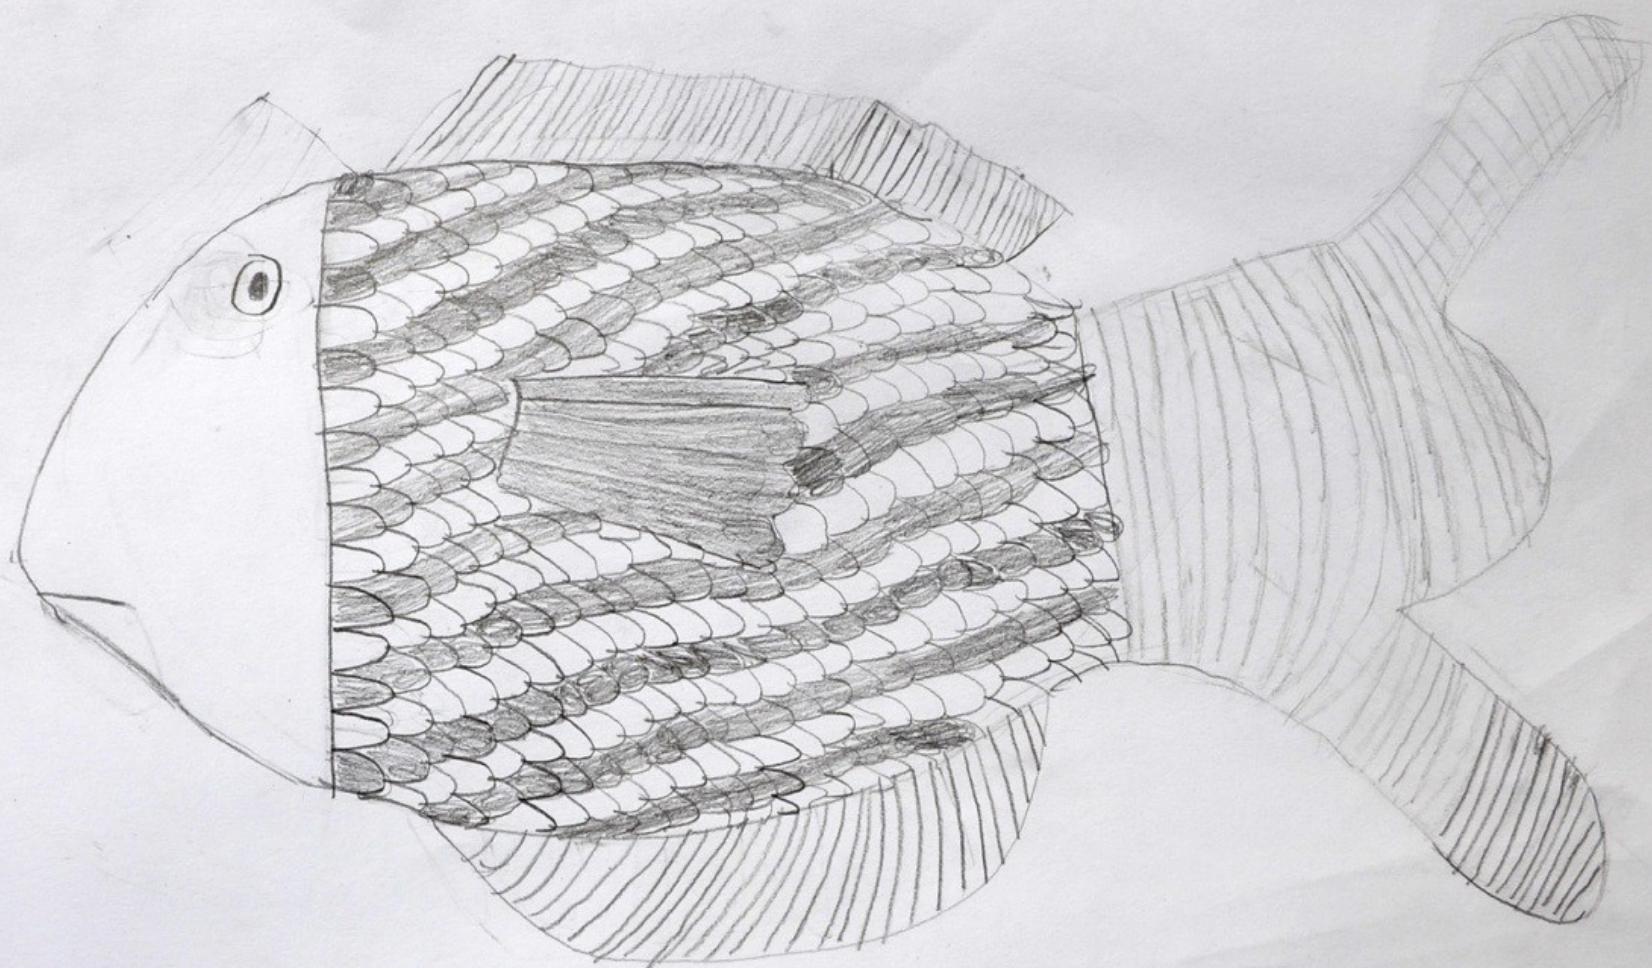

High performance,
4th grade

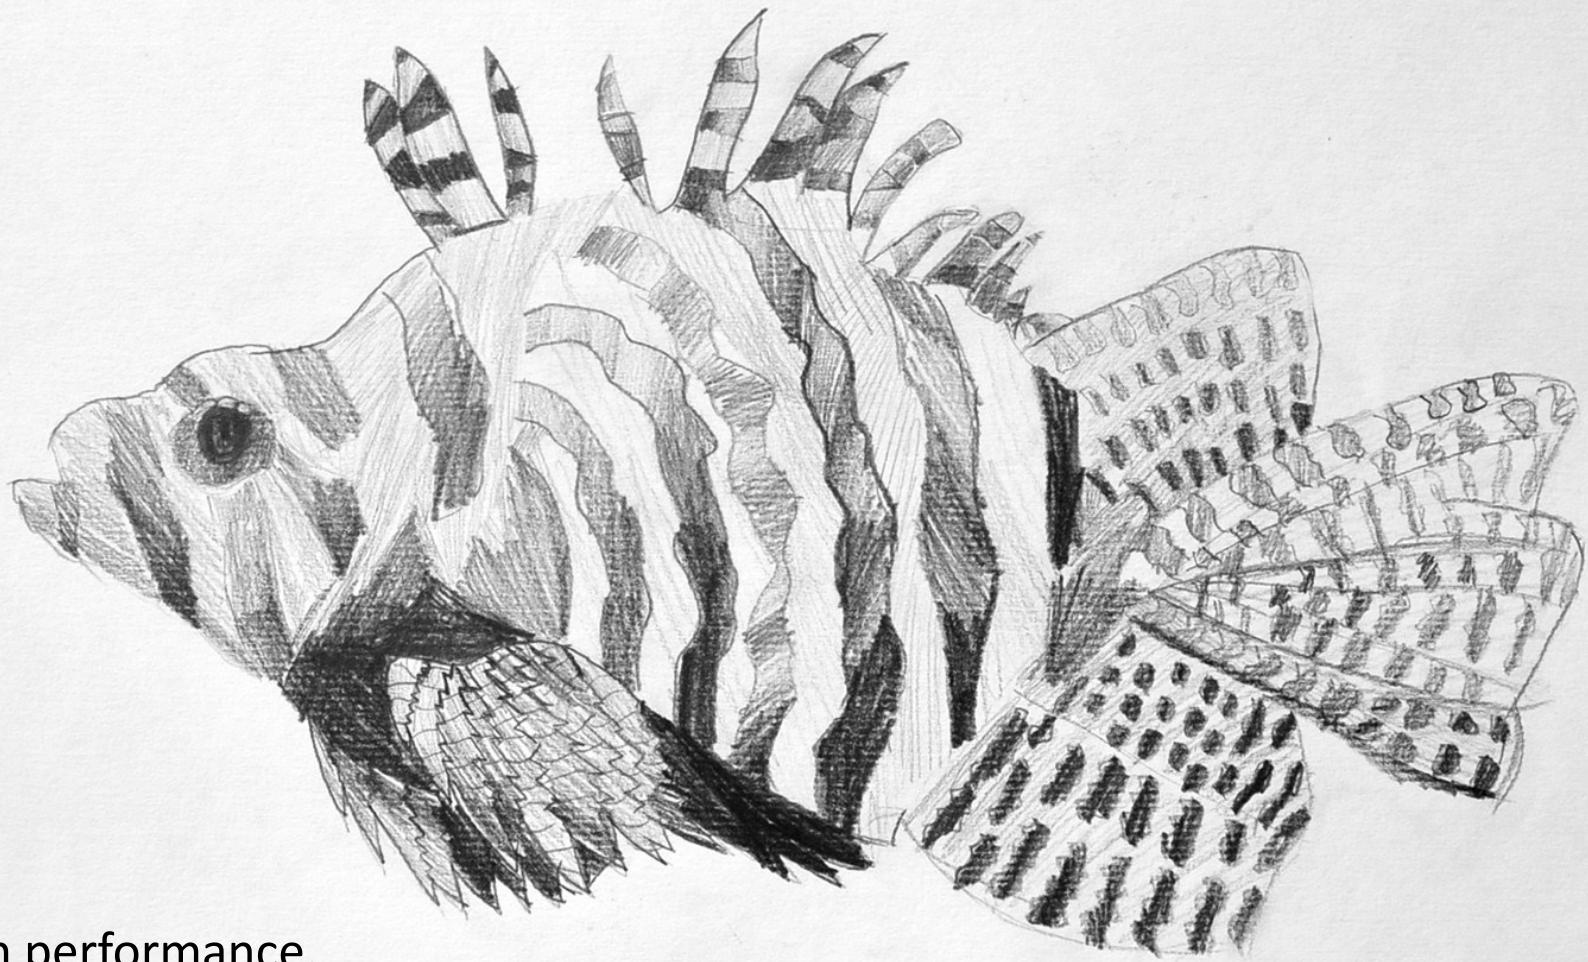

Poor performance, 8th grade

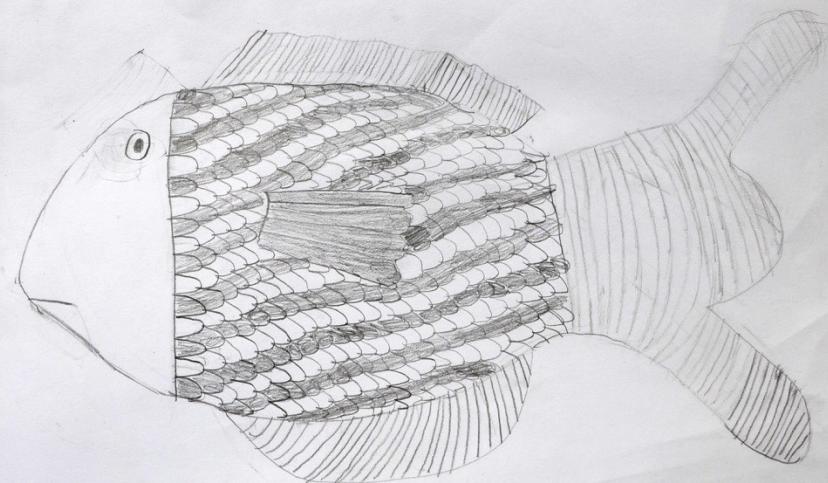

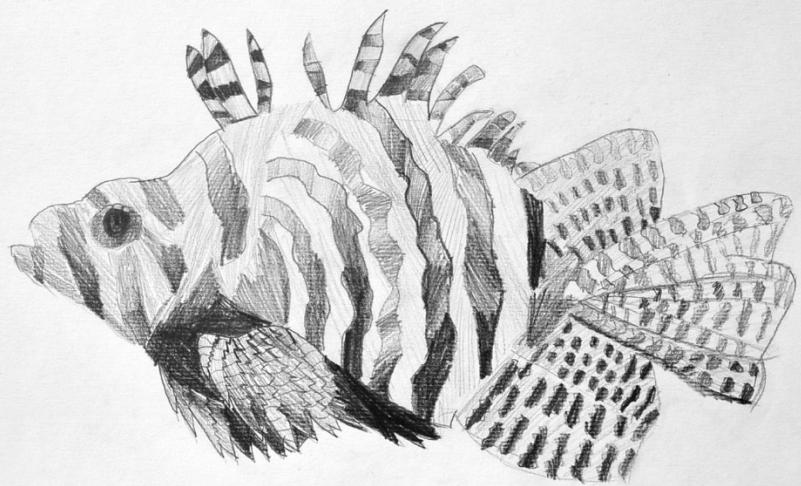

Poor performance,
8th grade

High performance,
8th grade

High performance,
8th grade

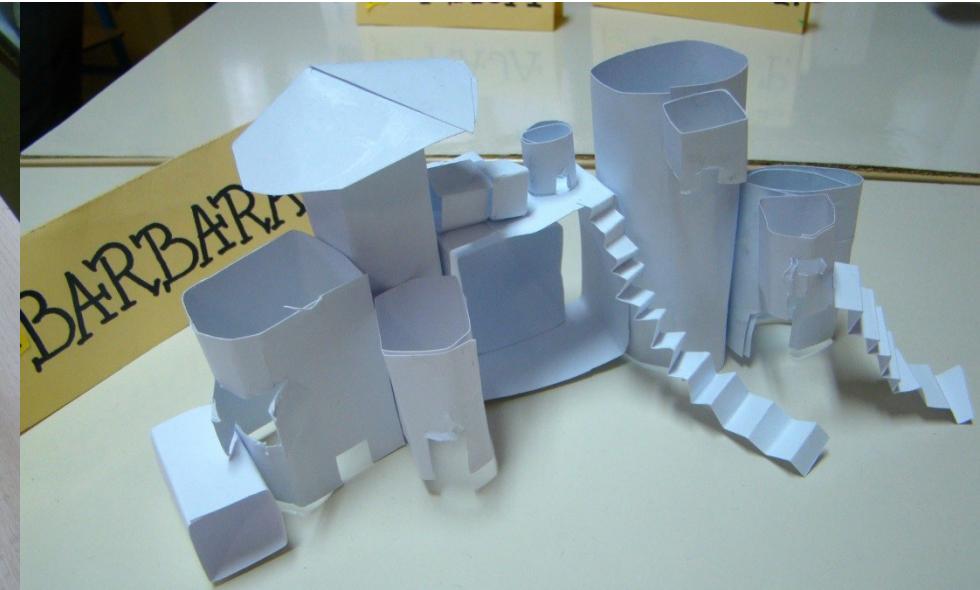

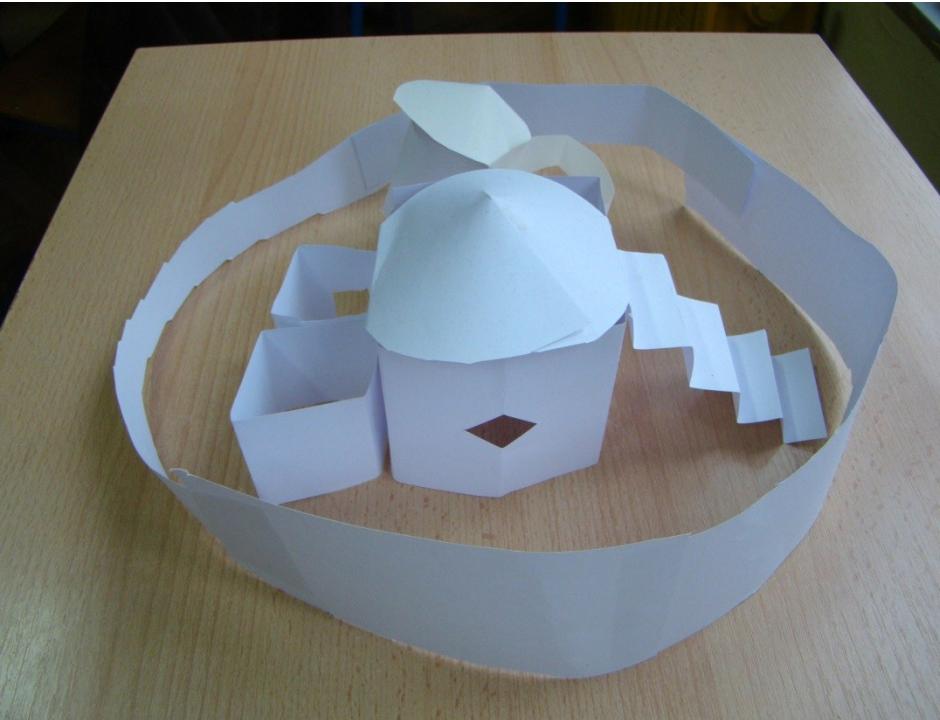

2. Successful representation of motifs stereotypes (clichés) – Average – originality

High performance

Poor performance; stereotypes and clichés

**Teacher achievement - high performance,
2nd grade**

Poor performance, stereotypes,
more teachers fault than students; 2nd grade

Poor performance, 3rd grade

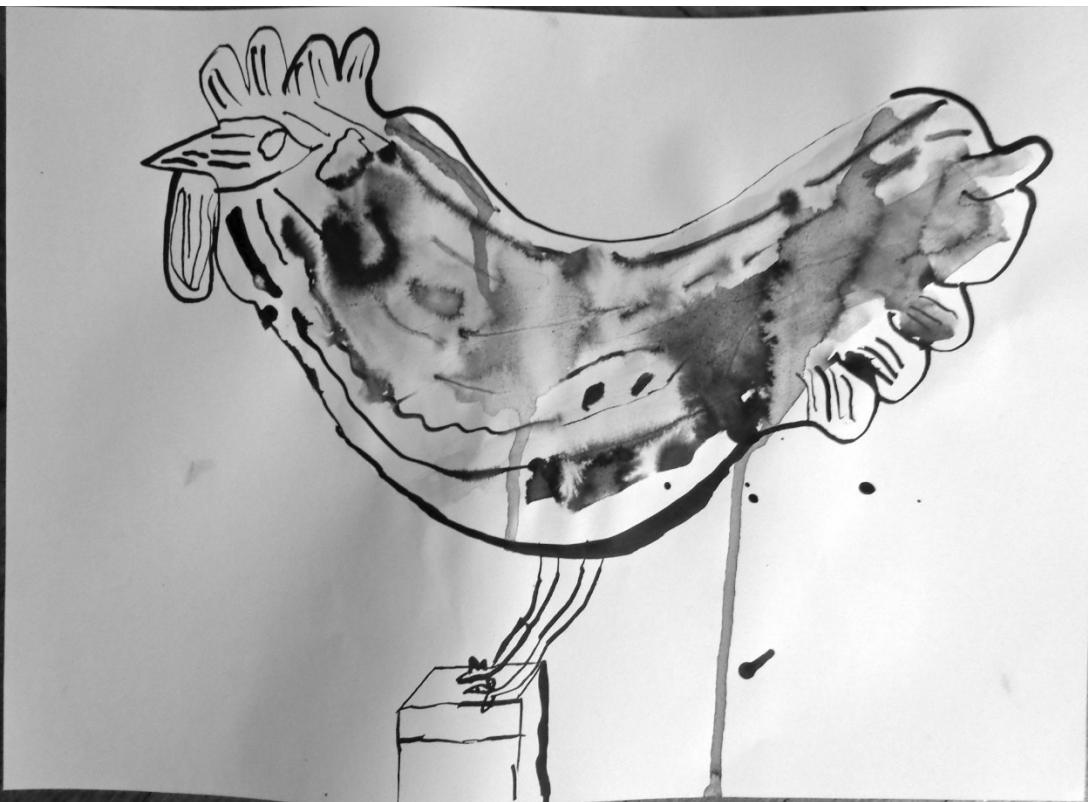

High performance,
3rd grade

2. Successful representation of motifs

- Elaboration / invested effort
- the size of the performance
- Originality, no clichés

Character of lines, colour tones,
Rooster, 2nd grade

8th grade

Templates (stereotypes, clichés)

Templates (stereotypes, clichés)

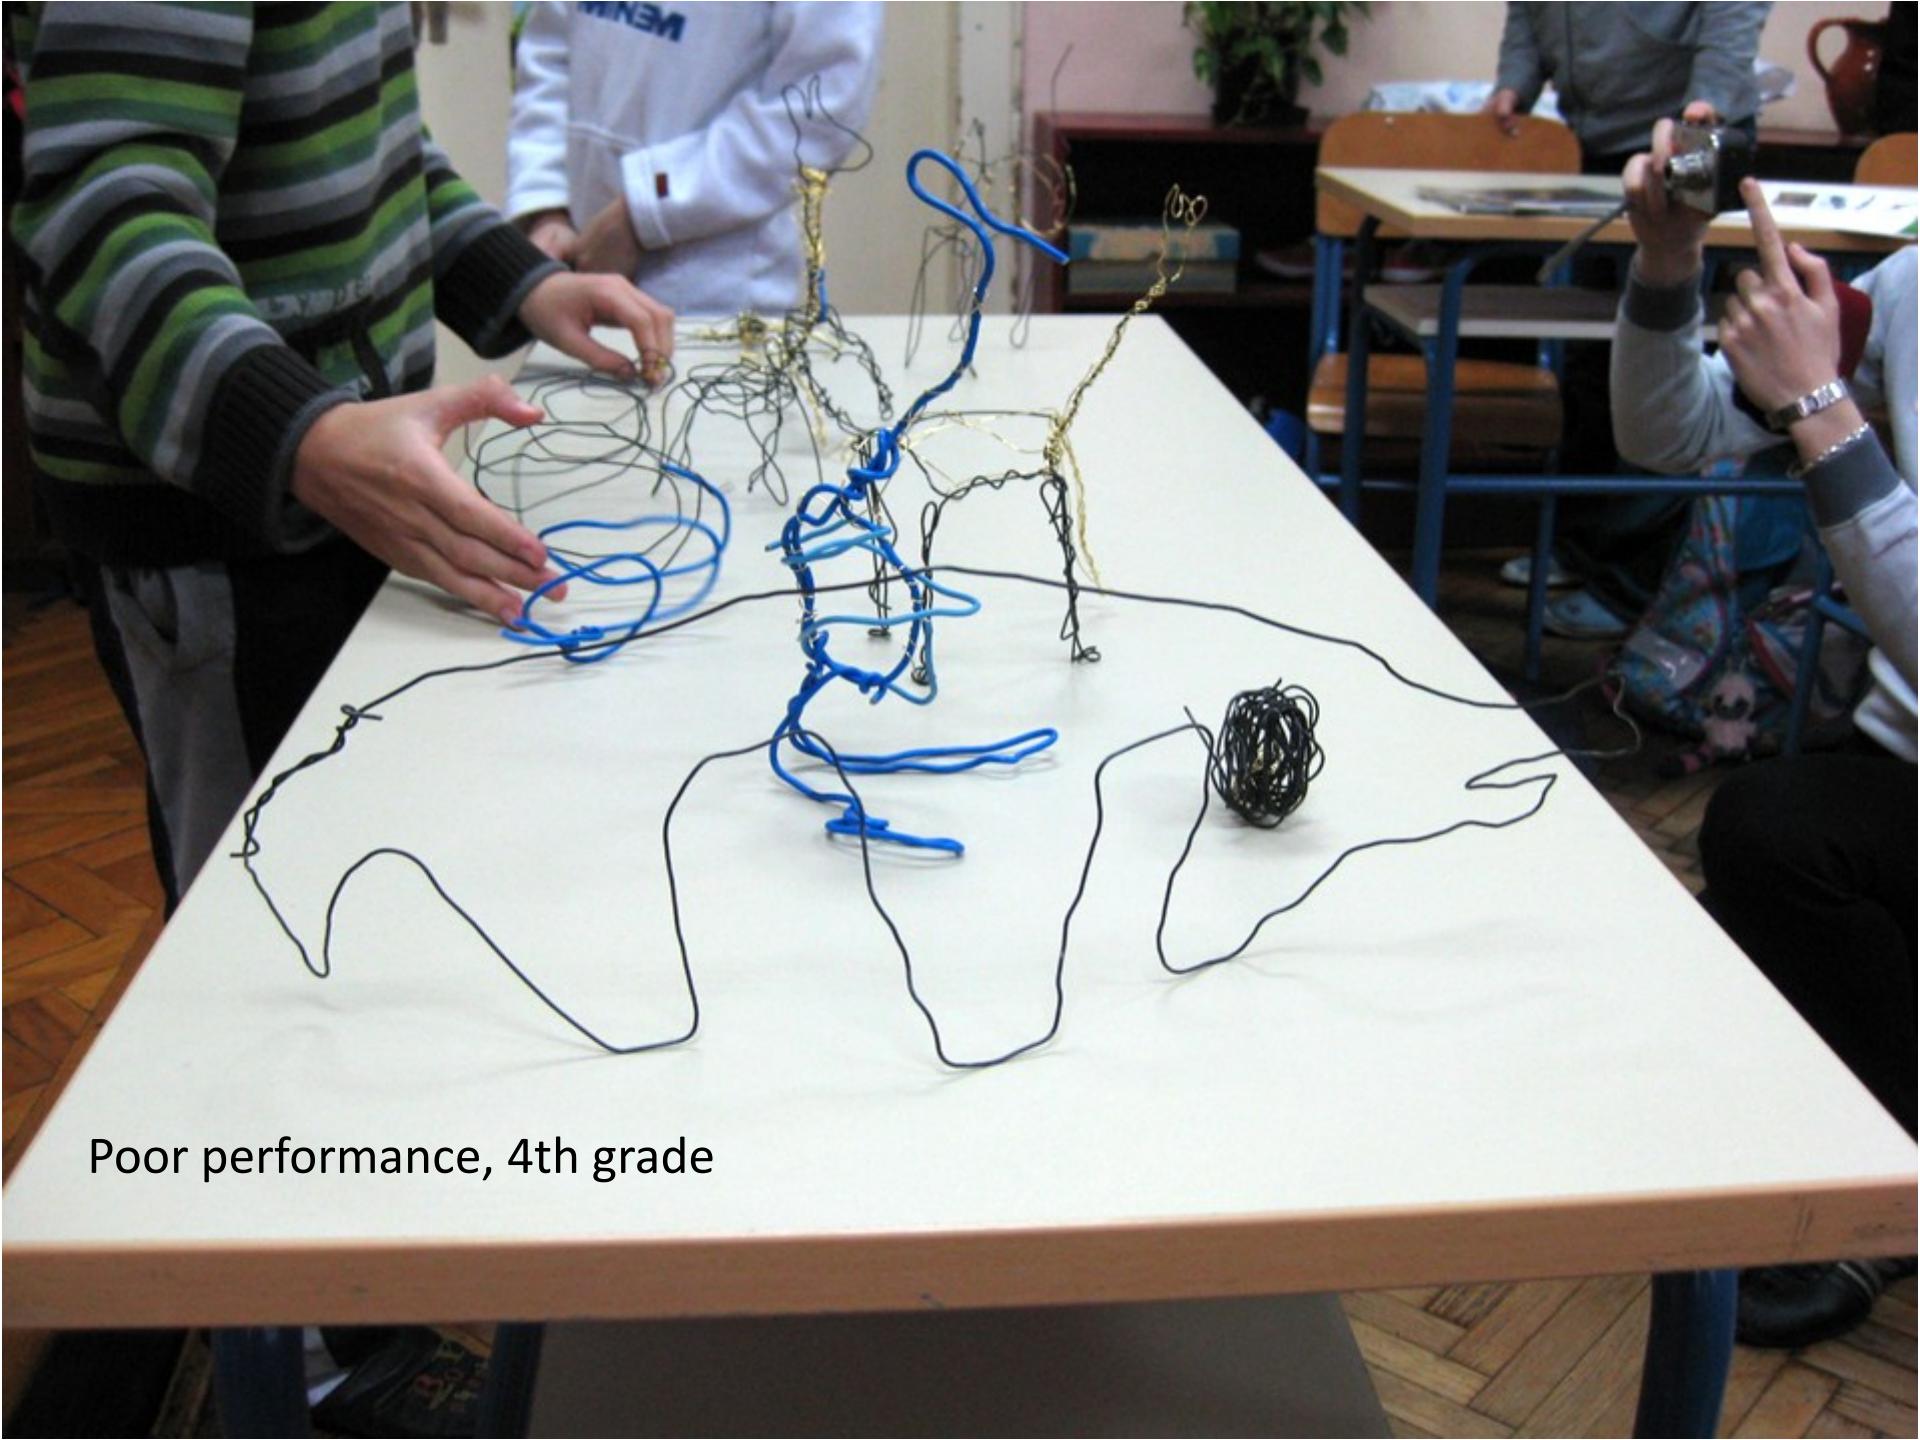

Clichés: students, parents and teachers

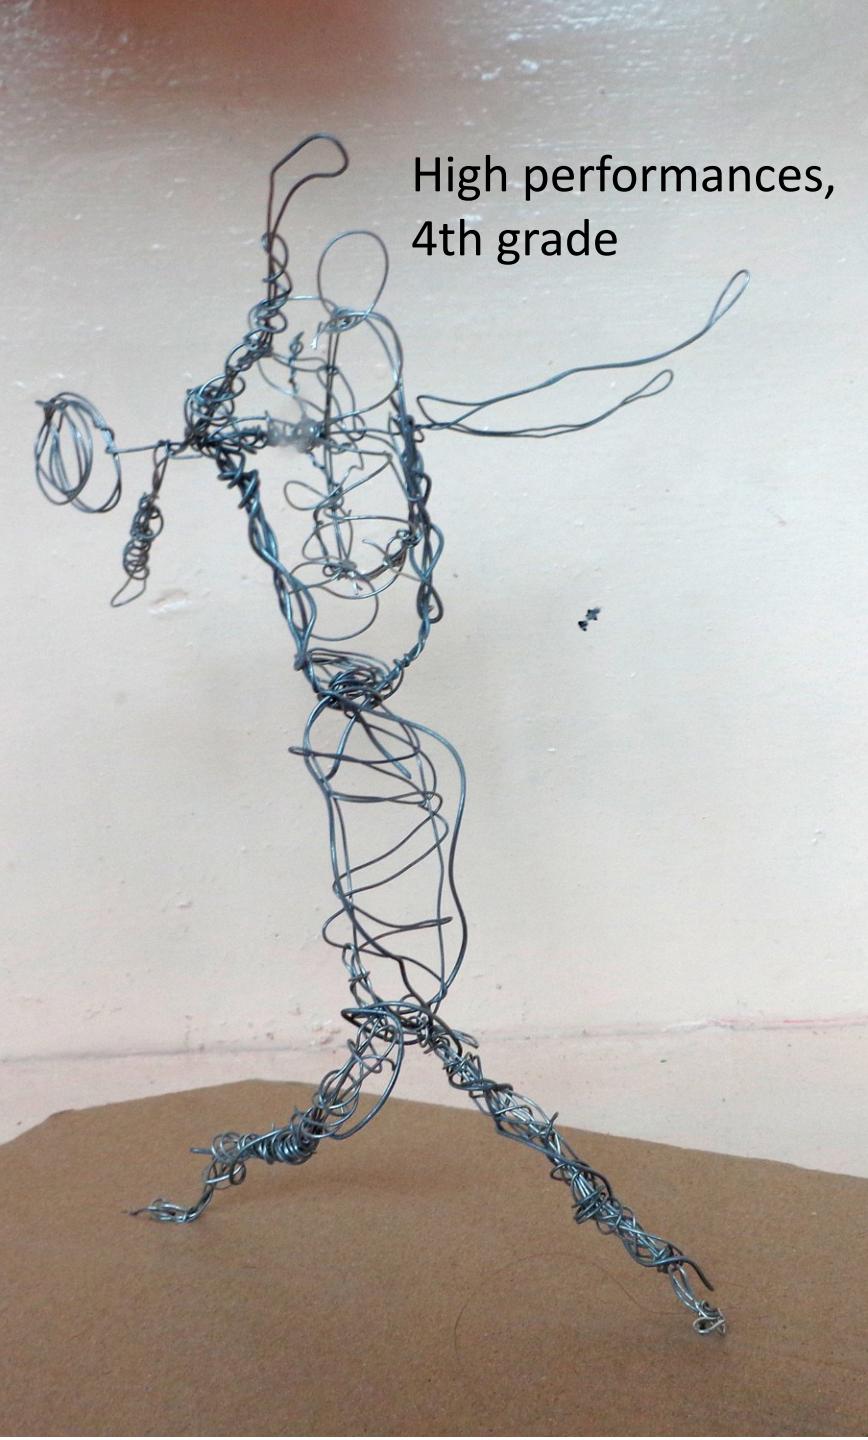

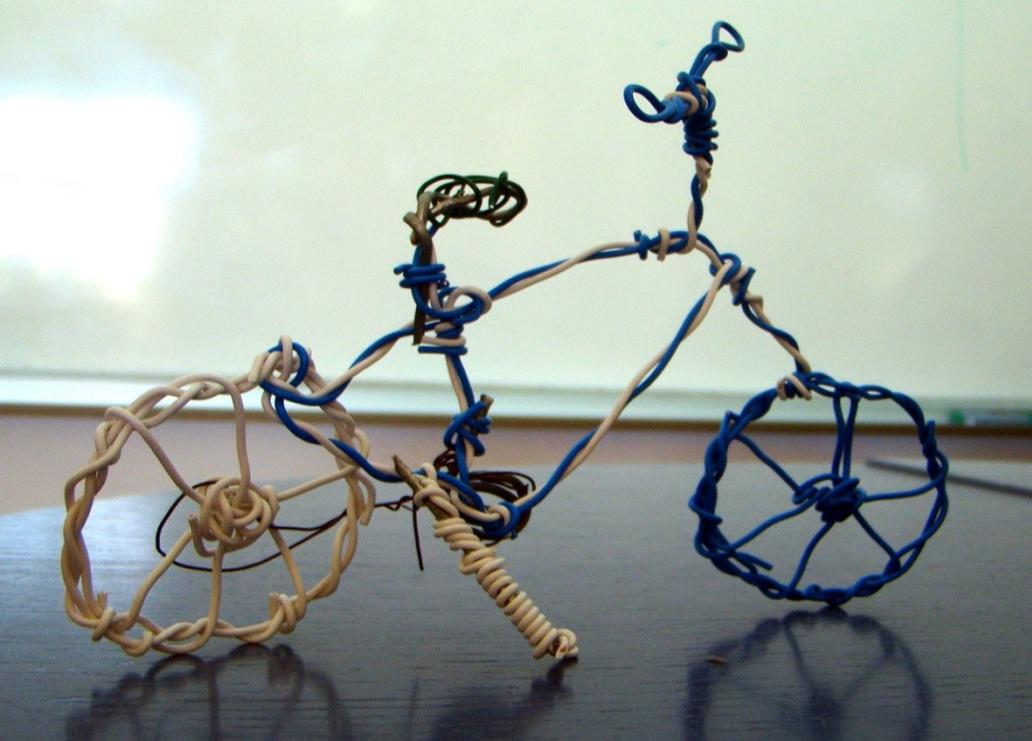

3. The success of using art materials

- The criteria for each individual piece of material

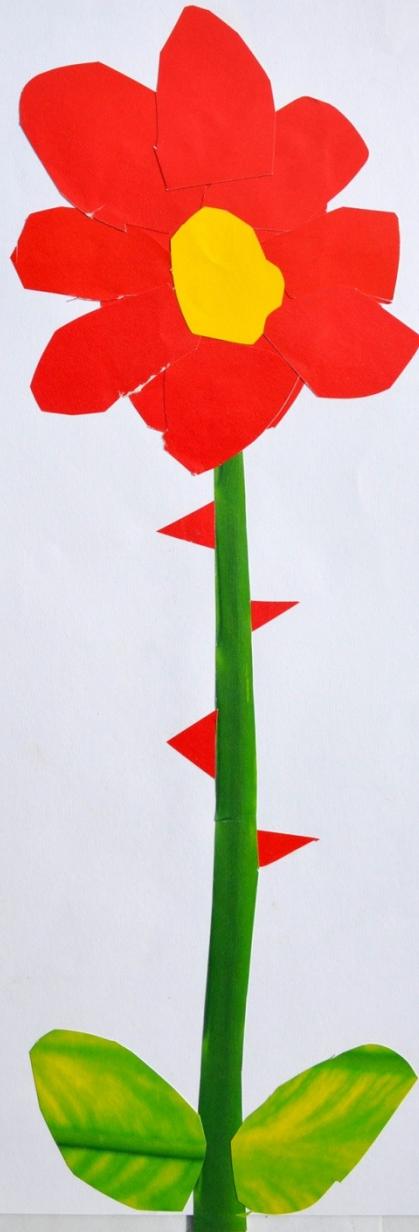

Poor performance, 4th grade

Criteria: 5-level grading scale of sensitivity for tempera

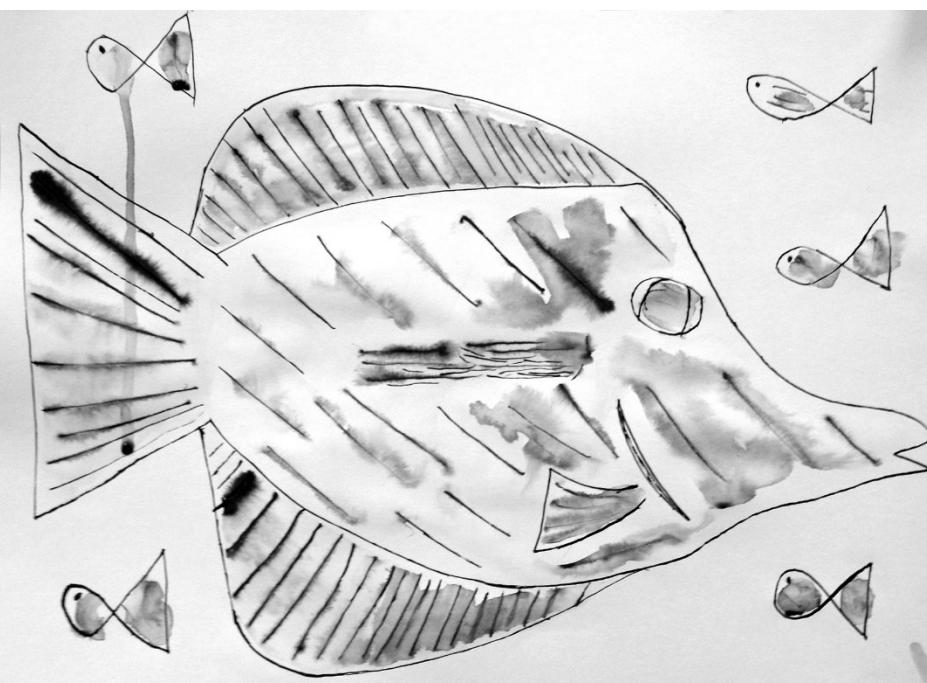

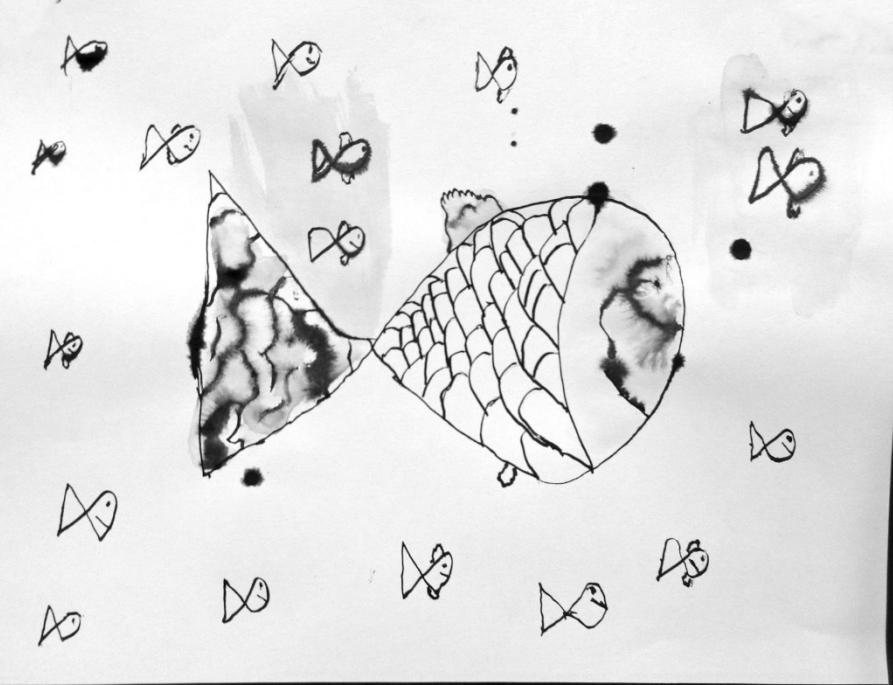

levels	tempera
5. Highly sensitive	<ul style="list-style-type: none"> - Individually achieves optimal color density - Individually mixes colors, achieves a large range of shades (more than 7 colors) - Individually explores his own painting handwriting - The color covers the entire paper
4. Sensitive	<ul style="list-style-type: none"> - Often finds optimal color density with minimal teacher support - Color mixes with minimal teacher support, achieves a greater number of shades (5 to 6) - Explores his own painting handwriting with little help from the teacher - The color covers most of the paper
3. Partially sensitive	<ul style="list-style-type: none"> - Color density is the average with occasional teacher support - Color mixes with occasional teacher support, achieves several shades of color (3 to 4) - Sometimes explores his/her own painting handwriting - The color fill the paper on average
2. Not sensitive	<ul style="list-style-type: none"> - No optimum density, color mixes automated, great help from the teacher is needed - Rarely mixes colors, achieves up to 2 shades of color - Does not investigate his/her own painting handwriting - The color fill the paper partially
1. Highly not sensitive	<ul style="list-style-type: none"> - The color is dry or leaks, there is no optimal density - He/she uses paint colors without mixing - The style of painting is copied from others (stereotypes and clichés) - The color fill the paper minimum, and with great help from the teacher

Poor performance, 2nd grade
